

Counter-pollutant

- NEUTRALIZES TOXINS
- TISSUE REPAIR

Chlorophyll is the green pigment in plants that harnesses the sun's energy in photosynthesis. Chlorophyll is to plants what blood is to humans; it performs metabolic reactions such as respiration and growth.

Chlorophyll has been used to repair tissues and is often used to help neutralize the pollution that we eat and breathe. It assists in the assimilation of calcium and other minerals and works to strengthen and purify the entire body.

The alfalfa plant, from which New Roots Herbal's rich chlorophyll comes, is an excellent natural source of chlorophyll.

Chlorophyll is recommended as an excellent specific for influencing anaemia of various kinds, improving the action of the heart and for reducing high blood pressure when it is abnormally high.

Liquid chlorophyll can help neutralize the toxic effects of some mutagens, which are ever-present in our food and water.

Chlorophyll is mainly used in its liquid form. The alfalfa leaves are processed to extract their chlorophyll content. Copper and sodium atoms replace the magnesium atom in chlorophyll so that it is made into a stable, water-soluble liquid. When ingested in its liquid form, chlorophyll remains unchanged until it reaches the small intestine.

Of course, chlorophyll can be obtained by eating plenty of fresh, green plants, especially those that are a deep green color. However, in plant form, chlorophyll is surrounded by fat substances which may result in only partial absorption in the small intestine.

Chlorophyll has been found to be non toxic, soothing to body tissues and safe for use by people of all ages. It can be used to clean fruits and vegetables when a few drops are added to water.

Each teaspoon contains:

Chlorophyll 100 mg/5 ml
In distilled water

Contains no: Artificial colour, milk, soy, corn, wheat, yeast or common allergens.

Suggested use:

Shake well. As an addition to the daily diet, take 1 teaspoon (5 ml) daily in a glass of water (250 ml).

Keep out of reach of children.
