

CoralCalcium

Convenient calcium and magnesium in liquid form

- HIGH BIOAVAILABILITY
- NON CONSTIPATING
- RESTORES A HEALTHY pH BALANCE

Made from 100% pure Okinawan coral, with magnesium, boron and vitamin D added for maximum absorption.

Microscopic animals create coral by absorbing and reforming ocean minerals into coral reefs. In the process, these minerals are transformed into positively charged ionic compounds with an affinity for the human body.

New Roots Herbal's Okinawan Coral Calcium contains 38% calcium, 7% magnesium, and all 72 trace minerals found in similar proportion to the human body. Research analyzing both serum calcium concentration and urinary calcium excretion has proven the superior absorption of coral, comparable to the results of calcium citrate over other forms of calcium carbonate.

The full coral story is a fascinating description of the coral mineral's high bioavailability, and the resulting benefits to the human body. Coral is rich in calcium and performs as an excellent calcium supplement due to its absorbability and does not cause the uncomfortable side effect of constipation commonly found with other calcium supplements. Most of the calcium supplements found in health stores are calcium lactate, calcium phosphate, and calcium carbonate, all of which are difficult for the body to absorb. The calcium and minerals naturally present in coral are highly bioavailable and easily 100% absorbable because:

1. Coral minerals are produced organically, having been previously digested by organisms.
2. Coral minerals have the ability to become ionic upon contact with moisture.
3. Coral minerals are in synergy with other minerals required to support their designated role.
4. Coral minerals are compatible with the human anatomy, so that the body readily accepts the calcium as part of its natural structure.

Furthermore, Coral Calcium creates a powerful alkalizing cocktail upon contact with water and becomes instantly bioavailable to cells within the human body. These alkaline minerals help to buffer harmful acids and restore a healthy pH balance. Our coral calcium supplement is formulated from 100% marine bed coral calcium – it is a natural source of calcium with 72 other essential minerals and nutrients necessary for good health. Human bones act as a calcium store – if your diet does not supply enough, your body will extract what it needs from your bones: it doesn't ask; it just takes it, leaving your bones brittle and creating an acidic cellular environment, possibly allowing for the development of osteoporosis. It's a proven fact that healthy people all have an alkaline cellular pH – you can too with coral calcium.

Each 30 ml contains:

*Calcium (coral calcium)	800 mg
*Magnesium (citrate)	250 mg
*Magnesium (gluconate)	150 mg
*Boron (citrate)	700 mcg
Vitamin D ₃	1200 IU
*Elemental value	

Contains 72 trace minerals.

Non-medicinal ingredients: In a base of glycerin, xanthan gum, citric acid, natural peach flavour and stevia.

Contains no: Dairy, wheat, gluten, yeast, soy or sodium.

Suggested use:

Shake well. Take 2 tablespoons (30 ml) daily.

Keep out of reach of children. Refrigerate after opening.

Manufactured under strict GMP (Good Manufacturing Practices)
