

Arthritis relief

- INFLAMMATION REDUCTION
- ANTI-SPASMODIC

Devil's Claw derives its name from its large hooked, claw-like fruit which has been known to harm and trap livestock grazing nearby. The tuber is used medicinally and has become a primary treatment for arthritis and rheumatism. In the Kalahari desert and Namibian steppes, the root is also used as a treatment for indigestion and other gastrointestinal problems in the same manner as Western bitters are used. Devil's claw is also used externally as an ointment to treat skin rashes, wounds, etc.

Devil's Claw has been used in Africa and German medical clinics for liver, gallbladder, and kidney ailments, lymphatic system toxicity, diabetes, nervous malaise, respiratory ailments, blood diseases, and indigestion.

Most clinical studies have shown that this plant has strong anti-inflammatory properties and is extremely helpful for sufferers of arthritis and inflammatory diseases. Devil's Claw was reported helpful to reduce swelling, relieve pain, improve motility in the joints, and improved feeling of well-being.

The British Herbal Pharmacopea recognizes Devil's Claw as having anti-inflammatory, antirheumatic, analgesic, sedative, and diuretic properties. In addition, Devil's Claw has proved effective in treating such complaints as dyspepsia and conditions relating to the proper functioning of bile salts, the gallbladder, and the enterohepatic circuit.

Devil's Claw is used for arthritis, gout, rheumatism, spondylosis induced lower back pain, inflammation, analgesic, sedative, antispasmodic, relieves pain and swelling, edema, water retention, indigestion, upset stomach, dyspepsia, bile salt problems, liver, gallbladder, and kidney ailments, elevated blood sugar, and sluggish immune systems.
